DOWN SYNDROME PARTICIPANTS AGES 12-25

Our research group invites children to participate in an online study. It would be a multisession experience over the course of 4-5 months, each session ranging from 30-60 minutes. Our goal is to provide a training program that may improve spatial abilities in children. We will compare the effectiveness of this program in typically developing children to adolescences and young adults with Down syndrome.

This study has been approved by the University of Alabama Institutional Review Board, #19-08-2264
